SECTION IV - CROP INSURANCE PROGRAM IN VIRGINIA 57

FOREWORD

This, the 1950 Annual Report of programs administered by the Production and Marketing Administration in the State of Virginia, is the fourth of a series that began with the 1947 Statistical Summary. Data is presented in a manner comparable to that of previous booklets so as to be of greater value to those using the information.

We are most appreciative of the cooperation received from committeemen, county office personnel, representatives of other agencies, farmers and many others whose combined efforts made this report possible.

It is hoped that by publication of these Annual Reports more of the people interested in our agriculture will become better acquainted with the programs administered by the PMA.

Virginia PMA State Committee

SECTION I - THE AGRICULTURAL CONSERVATION PROGRAM - 1950

The principal underlying the "ACP" is a simple, yet extremely vital one, assistance from all of us - through Government programs - to properly conserve for future generations the ability of our soil to produce the foods and fibers needed by an ever-growing population. To deplete these soils rather than conserve them might prove extremely dangerous to the vitality of the Nation itself.

That the ACP falls short of its goal cannot be denied. There is simply too much of our land that has been depleted by poor farming practices; but much can be done, and is being done to bring back to production these poor acres, and to maintain those that are fertile. Perhaps in time the "lesson" pointed out by ACP will make all of us conservation conscious. We cannot afford to lose fertility of our farmland; there are no fertile acres to replace those "lost" now.

In line with the campaign which began in earnest in 1949 the establishment and renovation of pastures again highlights the 1950 ACP Program. Assistance in establishing new pastures on nearly 100,000 acres was made in 1950, more than twice the acreage established in the previous year. In addition (although figures are not available) it is safe to say that most of the superphosphate and mixed fertilizers as well as much of the ground limestone and marl, for which assistance was allowed, was also used in the establishment or renovation of pastures.

Such progress as this is extremely gratifying when considered in the light of future benefit to Virginia. Along with the increased pasture there undoubtedly were increases in livestock numbers as well as corresponding decreases in cropland not suited to row crops. This seems to be an "ideal" trend for conservation programs to take--making possible an increased production of food and fiber, in line with population growths.

Due credit for the success of the "pasture" program must properly be given to other agencies of the Department and the State. All gave freely of their time and energy toward a common goal, the welfare and betterment of the farmers and the people of Virginia.

STATE SUMMARY OF ACREAGE DATA - 1950 ACP
(Participating and all farms in county)

SECTION II - MARKETING QUOTA PROGRAMS

A. Tobacco Marketing Quotas - 1950 Crop

Marketing Quota Programs are designed to assist in adjusting the supply of tobacco in line with demand, thereby preventing the accumulation of price-depressing surpluses with corresponding lower prices to growers.

The authority for the Tobacco Marketing Quota Program is contained in the Agricultural Adjustment Act of 1938, as amended, which empowers the Secretary of Agriculture to proclaim national marketing quotas for the various kinds of tobacco whenever it is determined that the total supply is in excess of the reserve supply level as defined in the Act. The quota proclamation by the Secretary, however, is contingent on a referendum in which producers are given the opportunity to cast their votes either for or against quotas. If two-thirds or more of the votes cast favor quotas, the Marketing Quota Program becomes operative.

In Virginia, quotas were in effect on Burley, Fire-cured, Flue-cured and Virginia Sun-cured Tobaccos for the 1950-51 marketing year. The following are the official results of the last referenda held in Virginia on the various tobaccos. Also shown are the years affected.

Kind of Tobacco	Date of Last Referendum	Crops Covered	Total Vote For Quotas	Total Vote Opposed to Quotas	Percent Favoring Quotas
Burley	Nov. 26, 1949	1950-51-52	7295	328	95.7
Fire-cured	Nov. 27, 1948	1949-50-51	4598	197	95.9
Flue-cured	July 23, 1949	1950-51-52	20372	338	98.4
Sun-cured	Dec. 15, 1949	1950-51-52	1850	171	91.5

The Tobacco Marketing Quota Program is closely related to the tobacco price support program since eligibility for price support loans is dependent on whether producers are in compliance with their acreage allotments.

Farm tobacco prices are supported by non-recourse loans at 90 percent of parity made to farmers producing the tobacco. Loans are made during regular marketing seasons through Growers' Cooperative Associations under contract with Commodity Credit Corporation. If bids on the warehouse floor are not above the loan level for a particular grade, the grower may negotiate a non-recourse loan, thus assuring himself of a price equal to the loan rate. Tobacco received under loan is dried, packed and stored by commercial facilities on a contract basis and is sold by the Cooperative Association. When all tobacco taken by the Association is sold, receipts in excess of loans and cost are prorated to the growers who placed the tobacco under loan.

The following is a summarization by kinds of tobacco, showing (1) total sales, (2) value, (3) average price per pound, (4) loan rate, and (5) percent taken under loan.

Tobacco Marketing Quotas - Cont'd.

Type of Tobacco	Total Sales (Million lbs.)	Value	Average Price	Loan Rate	Percent Placed Under Loan
Burley(Type 31)	495.4	$243,009,561	49.1	45.7	8.9
Flue-cured (Types 11-14)	1250.7	688,496,773	55.0	45.0	6.2
Va. Fire-cured (Type 21)	12.8	4,650,134	36.4	34.3	21.2
Va. Sun-cured (Type 37)	3.6	1,211,531	33.9	30.5	0.8

B. Cotton Marketing Quotas - 1950 Crop

The Cotton Marketing Quota Program as authorized under the Agricultural Adjustment Act of 1938, as amended, is provided to maintain supplies of cotton in line with demand insofar as possible and to prevent accumulation of price-depressing surpluses with resulting lower prices to growers.

The Agricultural Adjustment Act of 1938, as amended, directs the Secretary of Agriculture to proclaim marketing quotas when the total supply of cotton exceeds the normal supply as defined in the Act. The quota proclamation by the Secretary is contingent upon a referendum in which cotton producers are given the opportunity to vote for or against quotas. If after the quotas are proclaimed by the Secretary two-thirds or more of the growers voting in a national referendum are in favor of quotas, a cotton marketing quota program becomes effective.

In view of prospective supplies of cotton for the 1949-50 season being approximately 27 per cent larger than the normal supply, the Secretary proclaimed cotton marketing quotas for the 1950 crop and a referendum was ordered to be held on December 15, 1949. Cotton marketing quotas had not been proclaimed in previous years since 1942. Quoted below is a tabulation showing official results of the referendum on the 1950 crop as tabulated for Virginia and the Nation.

	Total Vote for Quotas	Total Vote Opposed to Quotas	Per Cent Favoring Quotas
Virginia	1,914	675	73.9
National	575,963	68,172	89.4

The Cotton Marketing Quota Program is closely related to the cotton price support program since for the crop year 1950 price support at the rate of 90 per cent of parity was available to cooperators. Non-cooperators were not eligible for price support. Had quotas not been approved, cooperators would have been eligible for price support at only 50 per cent of parity and non-cooperators would not have been eligible.

After 1950 allotments were determined and cotton marketing quotas were approved by growers, additional legislation was enacted which substantially increased the amount of the farm marketing quota particularly for the larger cotton farms. Such farms had not received equitable allotments under previous legislation, which required the determination of allotments and marketing quotas largely on the basis of cropland acreage rather than cotton history.

An entirely different approach to record-keeping in connection with marketings from that used for other quota commodities was used for the 1950 crop of cotton. This consisted of devoting closer attention to excess farms and withholding marketing cards for non-cooperating farms until marketing quota penalty was paid. An identification card with which to identify sales was issued for cooperating farms. No further records

were required for such farms, whereas, in the case of non-cooperators, the cotton could not be sold without payment of marketing quota penalty. To strengthen this approach to handling marketings under quotas, the legislation provided that a lien shall be in effect on the entire crop on excess farms until the marketing quota penalty is paid.

C. Peanut Marketing Quotas - 1950 Crop

The Peanut Marketing Quota Program as authorized under the Agricultural Adjustment Act of 1938, as amended, is designed to assist in adjusting the supply of peanuts more nearly in line with demand and by so doing to prevent the accumulation of price depressing surpluses with resulting lower prices to growers.

Under the Act, the Secretary of Agriculture is empowered to proclaim marketing quotas on peanuts whenever the total supply of peanuts becomes excessive and reaches the quota level defined in the Act. However, the quota program is not operative until growers voting in a referendum approve marketing quotas by at least a two-thirds majority.

The Secretary proclaimed marketing quotas on the 1948 crop of peanuts and 7,810 growers voting in a referendum held December 15, 1947, approved quotas for the years 1948-49-50 by a 96.2 percent majority. However, on January 2, 1948, the Secretary terminated quotas on the 1948 crop due to world shortage of food, fats and oils. Quotas were again proclaimed on the 1949 crop of peanuts due to changing world requirements and consequently the 1949 crop was produced and marketed under the quota provision of the Act. Since marketing quotas were approved in the referendum of December 15, 1947, for the years 1948-49-50 it was necessary that a referendum again be held in 1950 to determine if growers desired to continue the marketing quota program. Such referendum was held December 14, 1950, the Secretary having previously proclaimed marketing quotas on the 1951 crop. A total of 5718 votes were cast in Virginia of which 2771 were in favor of marketing quotas and 2947 opposed to marketing quotas. Although Virginia peanut growers failed to approve quotas, the vote for the entire nation gave 70.8 percent for quotas and 29.2 percent opposed; therefore, the quota program will be effective for the years 1951-52-53.

An important change in the peanut marketing quota program was made effective for the 1950 crop through an additional amendment to the Agricultural Adjustment Act of 1938, as amended, which authorized growers to produce an acreage of peanuts up to the 1947 picked and threshed acreage for the farm. Growers were permitted to market their excess peanuts (if the farm peanut acreage in 1950 did not exceed the 1947 picked and threshed acreage) at the prevailing oil price and received support price for the within quota portion of their production.

The Secretary later determined as authorized by the amendment that Virginia type peanuts were in short supply and authorized the conversion of all excess oil peanuts into edible trade channels, the farmers from whom such peanuts were acquired to receive all profits from the sale of such peanuts. The total pounds of excess oil peanuts marketed by Virginia farmers amounted to 11,242,456 pounds. Although payment has not actually been made to farmers at this time, it is anticipated that the amount involved for the State will be well over one-half million dollars.

D. Allotment Programs

Allotment programs are authorized under the Agricultural Adjustment Act of 1938, as amended, as a means of enabling farmers to voluntarily curtail production of specific crops and avoid surpluses in excess of normal domestic consumption plus a reasonable reserve. Such allotment programs are authorized by the Secretary whenever production exceeds the allotment level, as defined in the Act, but does not equal the marketing quota level also defined in the Act. Allotment programs do not provide penalties for exceeding farm acreage allotments. Compliance with such allotments is, however, a qualifying factor in determining eligibility for price support.

Since supplies of corn and wheat had exceeded the level at which allotment programs are authorized, but had not reached the quota level, the Secretary proclaimed allotments in effect for both of these commodities for the 1950 crop. Wheat allotments were effective in all counties in Virginia. Corn allotments were effective in 12 counties determined to be commercial corn counties, in accordance with provisions of the Act. Such counties were those in which corn production during the preceding 10 years had averaged 450 bushels or more per farm and 4 bushels or more for each acre of farm land in the county.

For the marketing year 1950, in which corn allotments were in effect in commercial corn counties, there was a significant effect of such program in noncommercial corn counties. This was caused by the support rate in counties outside the commercial area being only 75 per cent of the rate for the commercial area. For wheat, the support rate was determined on the same basis for all counties.

The allotment programs for the 1950 corn and wheat crops were administered in much the same manner as marketing quota programs with the exception of the marketing phase of quota programs. Generally, farmers in Virginia planted within their acreage allotments for both wheat and corn in 1950.

SECTION III - PRICE SUPPORT PROGRAMS

A. 1950 Commodity Loan and Purchase Agreement Program

1950 was the second year Virginia farmers utilized the various commodity loan programs to any great extent. Participation, however, was somewhat less than in 1949. Nevertheless, 499,504 bushels of wheat were put under loan, the majority of which was redeemed prior to maturity, and sold on the commercial market. This no doubt contributed to a more orderly marketing of grain by producers throughout the season, rather than at time of harvest only.

There is still a shortage of good on-farm storage space in Virginia, but this condition is somewhat improved over previous years. Under the Farm Storage Facility Loan Program, farmers are able to build new storage and install new drying equipment on a long time loan with low interest rates when they do not have the ready cash with which to build.

There has been considerably more interest by public spirited businesses in developing new public storage. During 1950 two new elevators were constructed, and an addition made to another. This has increased warehouse storage space for grains in Virginia by 710,000 bushels, and much more is still needed. It seems to be the opinion of many farmers in one area near a new warehouse that just the presence of this additional outlet for grain at a guaranteed price caused farmers to profit (even though many did not store their grain).

Again, as in 1949, the Federal-State Inspection Service of the Virginia Department of Agriculture contributed much to the success of the program by establishing grading stations where large quantities of grain are handled. The spirit and impartial cooperation of the Federal-State Inspectors who provide this grading service is highly gratifying. Producers of grain and warehousemen alike have benefited in the absolute assurance of the quality of grain stored.

B. 1950 Irish Potato Program

The 1950 Irish potato crop was supported at 60 percent of parity. Support prices for Virginia for potatoes loaded on cars or trucks with all marketing services performed were $1.55 per cwt. for lots grading U. S. No. 2 or better, 2-inch minimum diameter, and $1.00 for U. S. No. 1, Size B. Actual prices paid were much less as very few potatoes were shipped and actual purchase prices varied from 44.5 cents per cwt. to $1.50 per cwt., depending upon the position in which bought and the maturity of the potatoes.

Very few dealers participated in the program and most purchases were made on producers' farms on a grade composition basis for on-farm disposition.

1950 Irish Potato Program (Cont'd.)

Although purchases were considerably heavier than in 1949, total cost of the program was less. A total of 601,323 cwt. was bought at a total cost of $532,347.86 compared with 391,045 cwt. purchased in 1949 at a cost of $634,200.00. Based on BAE estimates of total production in the State, 10.7 percent of the 1950 crop was purchased by the Government.

Because recipients of potatoes were required to pay freight charges, very few potatoes were shipped for livestock feed and shipments to institutions were smaller than in 1949.

Price support was available only to producers who did not exceed their acreage allotments. Overplanting was much heavier than in prior years, particularly on the Eastern Shore. Of a total of 1861 allotment farms, 447 farms exceeded their allotments while 230 farms grew potatoes in excess of 3 acres without an allotment.

Total purchases were as follows:

	Cwt.	Commodity Cost
U. S. No. 1	309,635	$332,784.32
U. S. No. 2	77,971	94,153.08
U. S. No. 1, Size B	177,938	99,397.25
Culls	35,779	No cost
Total	601,323	$526,334.65
Cost of Checkloading		6,013.23
Total Cost		$532,347.88

Disposition of purchases were as follows:

	Cwt.
To Section 416 outlets (school lunch, hospitals, orphanages, and other institutions for human consumption)	37,720
To Stockfeed	6,002
To Penal Institutions	1,200
Resale to farmers for on the farm disposition	556,401
Total	601,323

As will be seen above, the bulk of purchases were resold to farmers for on-farm disposition. Under the provisions of the program if potatoes were offered to the Government and approved outlets were not available for disposition of the potatoes, they were sold back to producers or cooperating dealers at 1 cent per hundredweight. The potatoes were then taken by farmers who were permitted to use them for stock feed, fertilizer and other non-food uses. Reports indicate a large proportion of these potatoes were used for stock feed on the farms of the producers who bought them back. All potatoes other than those going to institutions for human consumption under Section 416 were dyed under the supervision of the Federal-State Inspection Service.

C. 1950-Crop Fresh Apple Purchase Program

The 1950-crop Apple Purchase Program did not actually commence until January 1951. There was no active program in Virginia during the fall harvest season of 1950. However, purchases were made from growers out of storages located throughout the apple belt in Virginia, extending from Winchester to Chilhowie, all the way through April 1951.

Purchases were confined to apples meeting U. S. Grade One, or better, and of varieties and sizes considered to be commercially acceptable. Purchases in Virginia amounted to 189,938 bushels (about 315 cars). At the single price of $1.65 per bushel, the commodity cost to the Government was $313,397.70 plus less than one per cent administrative costs.

Virginia purchases were distributed to all schools and public welfare institutions in Virginia and to schools in nine other southern States and to Puerto Rico. All of the 150 carloads delivered in Virginia could not be consumed in fresh form during the school year. Accordingly, apple canning projects were set up in a number of places, one of the largest being the State Farm at Maidens, Virginia. That facility converted thousands of bushels of apples into sauce and canned slices which Virginia schools are using in the 1951 school term.

During the early fall of 1951 apple purchases were reopened in Virginia. However, due to hail damage and a stronger commercial market, Government acceptances when the program closed on November 10 amounted to less than 17,000 bushels.

D. SUMMARIES

1. STATE SUMMARY OF 1950 COMMODITY LOAN PROGRAMS

a. WAREHOUSE STORAGE

Commodity	No. Loans	Quantity Under Loan	Loan Value	Quantity Redeemed
Wheat	1496	500,139.89	1,076,915.16	303,624.88

SECTION IV - TOBACCO CROP INSURANCE PROGRAM IN VIRGINIA

The Tobacco Crop Insurance Program in 1952 will be entering its eighth year of operation in Virginia with insurance in effect in ten counties. Continued gradual expansion is anticipated and eventually this insurance should be available in all of the major tobacco counties. Insurance will be offered for the first time in Charlotte County in 1952.

Table I
Number of Policyholders by Counties 1945 - 1951
